Professional Summary

Data Analyst aspirant with hands-on project experience in Python, SQL, Excel, Power BI, and machine learning. Strong foundation in statistics, data analysis, exploratory data analysis, feature engineering, and predictive modeling, with experience developing data-driven solutions for real-world problems. Skilled in transforming raw data into meaningful insights and building machine learning models to support data-driven decision-making.

Technical Skills

Languages: Python, SQL, R, C++
Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
Tools: Excel (Pivot Tables, VLOOKUP), Power BI, Tableau, MySQL, Jupyter
Concepts: Data Cleaning, EDA, Statistical Analysis, A/B Testing, Feature Engineering, Predictive Modeling, Dashboarding

Projects

ML-Based Personalized Government Scheme & Subsidy Recommendation System | *Python, Pandas, Scikit-learn*
- Developed a data-driven recommendation system to identify relevant government schemes and agricultural subsidies based on farmer and farm-related attributes
- Cleaned, transformed, and analyzed agricultural datasets using Python and Pandas to identify patterns and relevant eligibility factors
- Applied machine learning techniques to recommend suitable schemes based on user-specific characteristics and eligibility criteria
- Performed exploratory data analysis and feature engineering to improve data quality and support accurate recommendations

Loan Default Risk Analysis | *SQL, Python, Power BI, Statistics*
- Analyzed 50,000+ loan records to identify key factors influencing customer loan defaults
- Used SQL joins, CTEs, and window functions to create customer-level and loan-level metrics
- Performed data cleaning and exploratory data analysis using Python (Pandas, NumPy, Seaborn)
- Built a Power BI dashboard to monitor default rates, risk segments, and key customer attributes
- Applied statistical analysis, including hypothesis testing and correlation, to evaluate risk factors
- Provided data-driven recommendations to support credit risk analysis and loan approval decisions

Customer Churn Prediction | *Python, Pandas, Scikit-learn, Power BI*
- Analyzed customer data using Python and Pandas to identify patterns and factors associated with customer churn
- Performed data cleaning, exploratory data analysis, and feature engineering to prepare customer data for predictive modeling
- Built and evaluated a machine learning classification model to identify customers at higher risk of churn
- Created visualizations to communicate churn patterns and provide data-driven insights for customer retention

Education

Gulzar Group of Institutes – I.K. Gujral Punjab Technical University (IKGPTU) — **Khanna, Punjab**
Bachelor of Technology in Data Science — 2023 – 2027

Garh Raipur High School — **Raipur, West Bengal**
Higher Secondary (Class 12) – 67% — 2021 – 2023

Ucchahar High School — **Kharagpur, West Bengal**
Secondary (Class 10) – 95% — 2015 – 2021

Certifications

Pandas Essential Training – LinkedIn Learning
SQL for Finance Professionals – LinkedIn Learning
Data Structures with C++ – RCPL Centre of Excellence
